

HOW TO USE DVR

2 options: Catchup or set time

1.CATHCUP::::

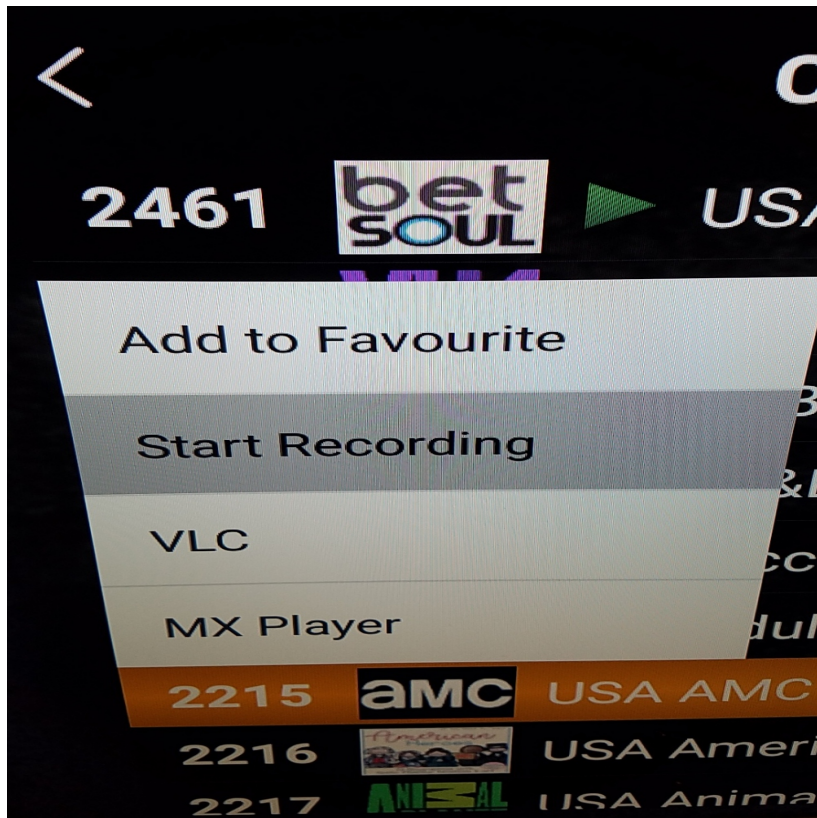

We have all day DVR on 10 to 20 channels they will record all day long and hold for 1 day ...each day as you go into CATCHUP you find the channel you want to watch then find the show you are interested in then click to enter that show.

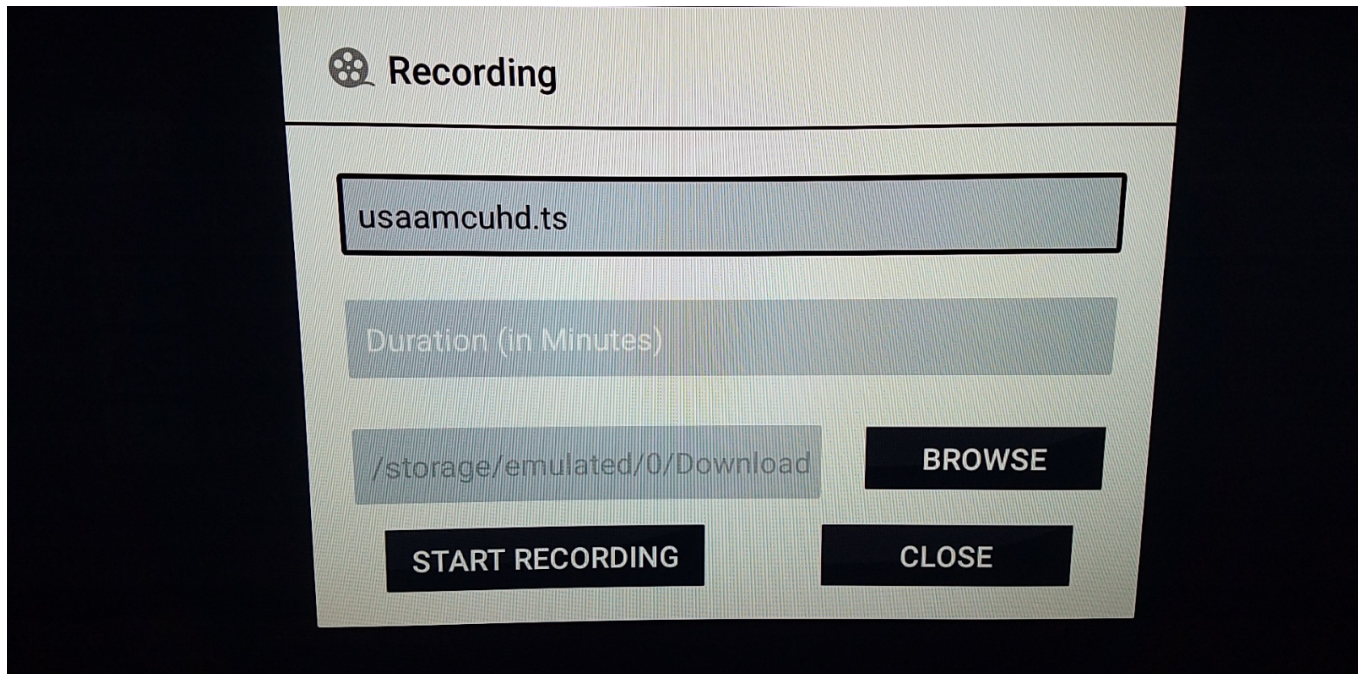

2. USE DVR on LIVE TV

Go to live tv on left(not Live with EPG) and select any section then find the channel you want to record. Press and hold circle button on remote to open a menu and then Start Recording.

A menu will open and then select the the duration in minutes of how long the show will play... I always suggest to add 10 minutes to what ever you are recording. This way of DVR you must set before the show starts and is very simple way of DVR ...for Firestick you must use an adapter with usb support to add an external USB Flashdrive.

After Duration is entered then go to Browse and select the EXTERNAL Drive to store on and then select START RECORDING.

Once Movie is recorded it will be stored on top right corner Under RECORDINGS next to account and settings. There you can play and delete the recordings.
